Jesse A. Wigfield

jawigfield@cpp.edu **(760) 793-9072**

Interests

Software Development involving Embedded Systems and Control Systems

Education

California Sate Polytechnic University, Pomona, CA. Graduating December 2016
B.S. in Electrical Engineering (Core GPA: 3.94/4.0) (Overall GPA: 3.52/4.0)

Technical Skills

Programming: C++, MATLAB, Python, Verilog, VHDL, P Spice, SQL, SVN, Git
Operating Systems: Windows, Linux, Mac OSX
Hardware: Microcontrollers, Spartan 3 FPGA, Oscilloscope, Soldiering, Electric Drive Systems

Professional Experience

NASA JPL, Pasadena, CA. US. June 2016 – Present
Software Researcher

- Researched and developed algorithms to
  - Query SysML spacecraft models for components
  - Match components with an SQL database of standardized components
  - Assure component inter-dependencies are met
  - Auto-code simulation initialization with matched components
- Developed the standardized component for spacecraft simulation

Campfire Alaska, Anchorage, AK. US. Summer 2015
Recreation Senior Staff

- Led a team of three counselors to remote Alaskan communities
- Organized and executed community events with 100+ attendees
- Taught the children swimming skills, cold water safety, and life skills

China Lake Child and Youth Programs, Ridgecrest, CA. US. May 2009 - September 2014
Lead Staff

- Directed a staff of 10-20 counselors in youth development programs
- Created three new youth clubs: Rock Wall Club, Paintball Club, and Fix-It Club.

Projects

Micromouse Autonomous Maze Solving Robot - IEEE

- Designed and tuned a PID control algorithm using C++ and an Atmel microcontroller
- Provided precise control of two synchronized DC motors
- Taught microcontroller programming to new members of IEEE

RF Range Finding - Senior Project

- Implemented Silicone Instruments RF transmitters and receivers via PIC microcontrollers
- Utilized matching circuitry, oscilloscope FFT, and band pass filters
- Accurately measured the time of signal travel using a Texas Instruments time to digital converter

VHDL Trigonometric Calculator Implemented - Spartan 3 FPGA

- Designed a sine and cosine calculator using the CORDIC algorithm
- Accomplished multiplication and division with structural arrays of adders

Team Research and Development Project - Traditional AI Methods

- Used MATLAB to study the effectiveness and utilization of the A* graph traversal algorithm
- Completed an algorithm that could solve mazes and illustrate the fastest possible solution

Personal Achievements

Eagle Scout

- Orchestrated troop meetings, camp-outs, hikes, and community service events
